

ECEN Assembly 2023

Thematic Group: Ecomanagment

Group convener: Hans Diefenbacher & Kilian Doerr

Aim

The workshop on eco-management aims to exchange practical environmental work in churches and parishes, to identify successful environmental and sustainability projects in churches in so-called twinning projects and transfer them to other churches in the form of partnerships.

Methodology

In a first step, concrete Twinning projects that have been successful in the first two rounds will be presented and, if possible, the conditions that led to their success will be identified.

The workshop will then give participants the opportunity to contribute their wishes and goals to realise their own projects.

Conditions for international cooperation today will be considered together, and suggestions for identifying start-up funding will be developed.

Outcome

The hopeful outcome of the workshop will be concrete planning of new practical partnership projects of European churches in the field of environment and sustainability, to contribute to make churches greener.
